Municipal Technical Services

Municipal board members and building inspectors are often asked to evaluate projects that may impact natural resources without having the background to do so. The Rockingham County Conservation District provides technical reviews to municipalities to assure compliance with local regulations and the protection of natural resources. Our scientist and engineers have extensive experience with site development impact design and installation reviews. In 2011 we reviewed nearly 200 projects in 17 towns.

Review services are typically paid for from applicant fees, with the RCCD working as an agent of the municipality.
